Work Distribution of a Heterogeneous Library
Staff - A Personnel Task Scheduling Problem

Claes Arvidson, Emelie Karlsson

February 8, 2016

Problem formulation and approach

The problem at hand requires a solution to an integer linear task assignment problem with a heterogeneous work force. Papers like Loucks and Jacobs, 1991 focused on a similar problem with a slight difference; the demand for staff increased as the workload grew at different times of day. Their approach was to, at a certain hour, assign tasks one at the time to workers based on their qualifications and availabilities. This, however, does not have to be considered in our case since the demand of personnel is fixed in time. Another difference is that their problem involved shift scheduling, while ours does not as they are already determined. The problem could therefore be classed as a task scheduling problem (TSP).

Personnel task scheduling problem (PTSP) is very similar to our problem and probably what it would be categorized as. Though, a significant hindrance is the lack of literature on the subject. However, a close relative to PTSP called Shift minimization personnel task scheduling problem (SMPTSP) which is a more well-researched area. Our model and information will therefore be based on that specific problem.

To solve the problem, our current approach is to initially create a basic schedule in AMPL using only CPLEX and constraint programming. This basic schedule shall be feasible so that all tasks have staff assigned to them as well as robust so that there will be as many stand-in staff at each task as possible. Thereafter it will be reworked and re-optimized based on further information from the librarians. After developing the mathematical model, a heuristical method will be used to resolve the problem. This makes it possible to remove the use of CPLEX. The reason for this is because it is undesirable for a library to purchase such a software. The current option under consideration is Microsoft Visual Basic, since the staff is already familiar with Microsoft Excel.

The work flow will consist of us developing a schedule with the input of our contact persons at the library and then presenting the schedule for review. The review will then be used for developing a new schedule until the library staff is content. We may also develop a simple user interface depending on the time available.

Planned references

Milestones

The master thesis is scheduled to continue until the end of the semester, 10/6. Completions of the report will be done during the summer and might continue into the autumn. The oral presentation is currently set for week 23. Regarding the half-time check, our recommendation would be right after Easter, around week 14.

Time plan

In table 1 below the planned workflow is presented with estimation of time duration for each activity. Observe that these are only preliminary and can come to vary a bit.

Table 1: Time plan for activities. Half time evaluation and thesis presentation weeks in orange. Blue for work schedule, red for thesis schedule and green for presentation schedule.

Week/Activity	(A)	(B)	(C)	(D)	(E)	(F)	(G)	(H)	(I)	(J)	(K)	(L)
3	Blue				Red							
4	Blue				Red							
5	Blue				Red							
6	Blue	Blue			Red	Red	Red					
7		Blue			Red	Red	Red					
8		Blue			Red	Red	Red					
9		Blue	Blue			Red	Red	Red				
10			Blue				Red	Red				
11			Blue				Red	Red				
12			Blue				Red	Red				
13												
14	Orange	Orange	Orange	Blue	Orange	Orange	Orange		Orange	Orange	Orange	Orange
15				Blue				Red	Red	Red		
16				Blue					Red	Red		
17				Blue					Red	Red		
18									Red	Red		
19									Red	Red		
20										Red		
21										Red	Red	
22											Red	Green
23	Orange	Orange	Orange	Orange	Orange	Orange	Orange	Orange	Orange	Orange	Red	Green

The letters represent the following activities:

- (A) Study of Literature
- (B) Develop: Mathematical model
- (C) Develop: Heuristic
- (D) Develop: Extended model
- (E) Write Chapter 1: Introduction (background, method etc)
- (F) Write Chapter 2: Related work
- (G) Write Chapter 3: Mathematical model
- (H) Write Chapter 4: Heuristic (Visual Basic)
- (I) Write Chapter 5: Extended model
- (J) Write Chapter 6: Computational results

(K) Write Chapter 7 and 8: Discussion/Summary and Conclusion

(L) Thesis Presentation and Preparation
